COLOR MOBILE ®

APPLICATION GETS SMARTER

NEW, ENHANCED FEATURES MAKE 24/7 ACCESS TO COLOR INFORMATION EASIER AND MORE COMPLETE

Comprehensive color information is always at your fingertips with the release of the improved COLORMOBILE® application. Combining new productivity functions and a responsive software design to work seamlessly across an array of smartphones and tablet devices, refinish professionals can access all the features of PPG's desktop Online Color formulations— virtually anywhere.

The redesigned visual interface for the *ColorMobile* application is simple to navigate and results are now easier to read. To guarantee fast, personalized results, *ColorMobile* users can set their preferences for their specific PPG or NEXA AUTOCOLOR® brand paint systems, units of weight (parts or grams), and units of measure (pints or ounces). For ultimate flexibility, preferences can be adjusted on the fly.

The refined 'search' process is more intuitive, and can be performed with multiple filters, including OEM/brand codes, source type, manufacturer, model, year, color description, usage and color. Search results include the latest prime, variant and special field formulas from a database updated every 24 hours. Users can quickly sort through potential matches for the correct formula, thanks to the application's advanced built-in logic.

Once the right match is found, the *ColorMobile* application delivers full formula details and VOC information— but that's just the beginning. Expanding the 'details' bar offers such useful information as minimum mix warnings and limited-use toner notifications. Mix formulations can be selected in very small amounts, including ounce quantities—a valuable feature for mobile repair users.

Email capability is another handy new feature found on the *ColorMobile* application. It allows users to forward formula information quickly and accurately, making it especially advantageous for sales and technical reps working offsite.

Built for the latest generation of mobile devices, the new software is compatible with a broad range of smartphones, tablets and operating systems, including iOS, Windows® and Android. Best of all, the *ColorMobile* application is available for free. For simplicity, it utilizes the same User ID and Password as used to access PPG Online Color formulations. To learn more, or to add a shortcut to your home screen, go to www.colormobile.com.

KEY FEATURES

- 24/7 ACCESS TO PRIME, VARIANT AND SPECIAL FIELD FORMULAS
- FULL FORMULA DETAILS INCLUDING REVISIONS, UPDATED DAILY
- PPG AND *NEXA AUTOCOLOR* BRAND SUPPORT
